

PETROMARK® 10233 CERAMIC PASTE SPRAY

PETROMARK® 10233 CERAMIC PASTE is a high-tech connection and assembly paste which consists of very small ceramic parts divided in a non-melting bentone grease. Does not contain any metals and reduces wear on places with high friction. Provides quick and easy dismantling of wire connections and packing, even after having been exposed to high temperatures until 1.200°C, corrosive atmospheres or high pressures. Prevents cavitation and etching. Water resistant and will not be affected by acids, alkalise or salts. Temperature range -40°C up to 1.100°C. Use: Wire connections, brake-pads, chains, cranes, engine parts etc.
