

## PETROMARK® 10407 MoS2 EP-2 GREASE

PETROMARK® 10407 MoS2 EP-2 GREASE is a high-performance multi-purpose grease especially developed for homokinetic joints. The addition of Molybdenum disulphide (MoS2) ensures very good lubrication even after grease leaks due to excessive temperature increase. Based on mineral base oils, lithium soap thickener and MoS2. Offers excellent resistance against corrosion and oxidation, and is water-repellent. Good mechanical stability resulting in a very long life-time of this grease. PETROMARK® 10407 MOS2 EP-2 GREASE has excellent anti-wear characteristics and very high resistance to extreme pressures. Suitable for the lubrication of heavily loaded plain bearings, homokinetic joints, chassis lubrication points, agricultural machinery. Temperature range -30°C up to +125°C.
