

PETROMARK® 10411 RADIATOR SEALER TRUCK PACKAGE

PETROMARK® 10411 RADIATOR SEALER TRUCK PACKAGE water-based consists of natural resinous fibres, stabilizers and anti-corrosion additives in suspension. Recommended for sealing off leaks in radiators, heaters, cylinder heads and engine blocks cracks up to 0,9mm wide. Works quickly, permanently and reliably and cause no obstructions. Miscible with all types of anti-freeze and cooling liquids. Does not damage hoses, gaskets or metals. Suitable for cooling systems with a capacity of no more than 60 litres. By adding this product preventively to the cooling system it affords comprehensive leakage protection and guarantees a trouble-free working system. Instructions for use: Shake canister well before use and add the content of the can to the cooling system with switched-on heating and warm and with the running engine and with the cabin heater switched on. Keep engine running for approx. 10 minutes or drive a short distance. Dirty cooling systems should first be cleaned with PETROMARK® 10412 RADIATOR FLUSH.
